

#InclusiveWorld

Inclusion in Garden:

I have a routine of meeting the plants in my garden every morning. I am aware of each and every step of their growth. This routine gives me an immense peace of mind.

Today following the same routine, I was plucking flowers to make a garland for God. While plucking I saw each flower was so different, some were fully bloomed, some had short petals, some with a fat stem, for few the petals were twisted but still they all looked so beautiful.

When I sat to make the garland, I noticed that I had to change my way of inserting the flowers to include them in the garland. All flowers irrespective of twists, short, fat or big went into the garland. Together with all the flowers, the garland looked thick, beautiful and complete.

If I had discarded those flowers which were twisted or short, I would have got a very small and thin garland. I am pretty sure, it would not have been beautiful like the one I had made. In real life too, we all are God's creation and each creation is different. Like how I found the means to include all the flowers in the garland, I learnt that I must always find means to include every child in education. By including neurodivergent at every level and at every aspect, our world will be a better place to live. Let us join hands to find all the methods to make this world inclusive.

Today with satisfaction, I offered this garland to the God praying for an inclusive world.
